

# PHS

Public Health Sciences Division

# Values

## Center Mission

The elimination of cancer as a cause of human suffering and death.

## Division Goal

To identify strategies to reduce the incidence of, and mortality from cancer (and other diseases).

## Core Values

The Division is committed to excellence in achieving this goal through continuous improvement and promoting:

Focus on the science as primary-by seeking to remove unnecessary requirements which impede achieving world-class research results.

World-class scientists require a world-class staff.

Every person deserves and should expect good treatment and respect supported by a safe and secure work environment (as assured by each individual's actions).

Every employee is important to achieving our scientific objectives - teamwork, a sense of family, and being part of a whole are central to accomplishing this goal.

All Center faculty and staff are partners in achieving PHS' goals.

What matters most are your contributions, not just your title or degrees.

Enabling each person to be the best that she/he can be by encouraging individual professional development and innovative thinking essential to achieving our research goals.

Effective two-way communication, openness, and sharing lead to the best results while reducing risk.

Horizontal relationships are often more important than vertical relationships.

We all are in the solutions business!
